PROVISIONAL SPECIFICATION.

Improvements in Models Made of Chocolate or the like.

We, DE VILLARS, LIMITED, of 80, Finsbury Pavement, London, E.C. 2, a company organised under the laws of Great Britain, do hereby declare the nature of this invention (which has been communicated to us by De Villars Société Anonyme, of Perolles, Fribourg, Switzerland, Manufacturers, a joint stock company organised under the laws of the Swiss Confederation) to be as follows:—

This invention relates to models made of chocolate or the like such, for example, as a human figure.

According to this invention a model made of chocolate or the like comprises a plurality of members, adapted to be mounted one upon the other, each member being so shaped as to establish a ball and socket joint with its neighbouring member.

In one form of construction, a human figure made of chocolate is formed of two

oval portions, the head portion and the body portion; the latter portion having a supporting base shaped to represent feet and being provided at its apex with a concave indentation to receive the head portion. The portion from the waist to the feet, however, may form a third portion, the apex thereof being shaped similarly to the apex of the body portion and adapted to receive the said body portion.

This invention permits of human figures being formed of a plurality of Easter eggs, for example, amusement being afforded owing to the fact that the various portions forming the figure can be set at varying angles to one another.

Dated this 14th day of September, 1927.

COMPLETE SPECIFICATION.

Improvements in Models Made of Chocolate or the like.

We, DE VILLARS, LIMITED, of 80, Finsbury Pavement, London, E.C. 2, a company organised under the laws of Great Britain, do hereby declare the nature of this invention (which has been communicated to us by De Villars Société Anonyme, of Perolles, Fribourg, Switzerland, Manufacturers, a joint stock company organised under the laws of the Swiss Confederation) and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

This invention relates to models made of chocolate or other sweetmeat to represent human or animal figures, for example.

According to this invention, the model is formed in parts resting one upon the other without positive engagement or connexion, contacting surfaces being shaped so as to establish a ball and socket joint. For example, the head of a human or animal figure is moulded separately from the body, the neck being rounded

underneath to form a base which rests in a rounded cup formed in the top of the body portion. The body portion may in some cases be subdivided into two or more parts resting one upon the other in a similar manner to the head. The base of the body portion is shaped to represent feet so that the figure will stand upright. The arrangement is such that the head can be supported at various angles to the body, and likewise when the body is subdivided the parts thereof can also be tilted. The rounded base or ball portion of the head or other component part may be weighted when the part is hollow by incorporating an extra thickness of chocolate or other sweetmeat.

The invention is illustrated by the accompanying drawings which show three models formed of chocolate.

In Figures 1 and 2 the model comprises a head portion 1 and body portion. In Figure 3 the body is subdivided into two portions 3 and 4.

Having now particularly described a

[Price 1/-]

ascertained the nature of our said invention and in what manner the same is to be performed, we declare that what we claim is:—

5 1. A model of chocolate or other sweetmeat representing a human or animal figure comprising two or more parts resting one upon the other without positive engagement or connexion, contacting surfaces being shaped so as to establish a ball and socket joint.

2. A model as claimed in Claim 1 comprising a head portion moulded with a round base and a body portion moulded
15 with a round cavity so that the head can be supported by the body at various angles.

3. A model as claimed in Claim 2, in which the body is subdivided into parts which rest one upon the other in a manner similar to the head on the body.

4. A model as claimed in Claim 1, 2 or 3, in which the moulded parts are hollow but weighted at the base by means of an extra thickness of chocolate or
25 other sweetmeat.

5. Models of chocolate or other sweetmeat, substantially as described and illustrated.

Dated the 14th day of May, 1928.
